GEOTECHNICAL TESTING REPORT

**GEOTECHNICAL TESTING REPORT
PEDRICKTOWN SUPPORT FACILITY
SALEM COUNTY, NEW JERSEY**

**FOR:
VERSAR, INC.
LANGHORNE, PENNSYLVANIA**

**JOB NO. G079.001
JUNE, 1993**

June 29, 1993

Mr. Chuck Gaffney
VERSAR, INC.
2010 Cabot Boulevard, West Suite
Langhorne, Pennsylvania 19047

**SUBJECT: GEOTECHNICAL TESTING, CONTAMINATED SOIL
SAMPLES
PEDRICKTOWN SUPPORT FACILITY, SALEM CO., NEW JERSEY**

Dear Mr. Gaffney:

Transmitted herewith are the results of geotechnical laboratory testing performed on contaminated soil samples from the subject project. The study was requested by Mr. Bruce Wickline on basis of our proposal no. PE-93-0151 dated February 12, 1993 and authorized by Purchase Order No. 783 dated June 3, 1993 for work in support of Contract No. DAAA15-90-D-0014.

A Total of twenty-seven (27) jar samples were delivered in good condition to our laboratory facility in Middleport, New York on June 11, 1993. After cross referencing between jar label and Chain-of-Custody records the samples were identified and catalogued as follows:

<u>LAB NO.</u>	<u>FIELD SAMPLE NO.</u>	<u>SAMPLE DEPTH (FT)</u>
1630.001	MW2-001	14.0 - 16.0
1630.002	MW7-001	9.0 - 11.0
1630.003	MW8-001	9.0 - 11.0
1630.004	MW10-001	14.0 - 16.0
1630.005	MW11-001	9.0 - 10.0
1630.006	MW11-002	9.0 - 11.0
1630.007	MW12-001	9.0 - 11.0
1630.008	MW12-002	2.0 - 4.0
1630.009	MW13-001	2.0 - 4.0
1630.010	MW14-001	9.0 - 11.0
1630.011	MW14-002	10.0 - 12.0
1630.012	MW15-001	10.0 - 12.0
1630.013	MW16-001	0.0 - 2.0
1630.014	MW16-002	9.0 - 11.0
1630.015	MW16-003	9.0 - 11.0
1630.016	MW20-001	9.0 - 11.0
1630.017	MW21-001	10.0 - 12.0
1630.018	MW22-001	9.0 - 11.0
1630.019	MW24-001	0.0 - 2.0
1630.020	P4-001	4.0 - 6.0
1630.021	P9-001	10.0 - 12.0

<u>LAB NO.</u>	<u>FIELD SAMPLE NO.</u>	<u>SAMPLE DEPTH (FT)</u>
1630.022	P15-001	20.0 - 22.0
1630.023	SB10-001	2.0 - 4.0
1630.024	SB11-001	2.0 - 4.0
1630.025	SB11-002	2.0 - 4.0
1630.026	SB11-003	2.0 - 4.0
1630.027	SB16-001	2.0 - 4.0

Prior to initiation of the testing program sections of the field safety plan for the project describing the contaminants anticipated in the soil samples were reviewed by our safety officer and a safety plan was developed for handling the samples in the laboratory. Level C protection was designated for phases of handling and testing which could not be performed in fume hoods.

As requested in the Scope of Work for Geotechnical Soil Analyses all the samples should be classified in accordance with the Unified Soil Classification System (ASTM D2487). To develop the data necessary for classification all samples were tested for grain size distribution (ASTM D422).

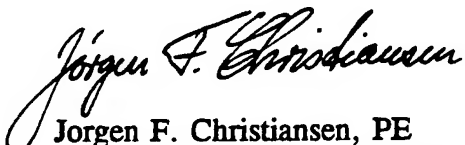

Since the soils primarily were sandy all samples were examined by the undersigned prior to testing and those samples that were clearly non-plastic were so designated by visual determination. This procedure was approved in consultation with Mr. Dan Morganelli, Hydrogeologist. Seven (7) of the samples (Lab Nos. 1630.001, 1630.007, 1630.014, 1630.018, 1630.020, 1630.024, and 1630.025) were perceived as possibly having some plastic fines. On these samples we attempted to perform test for liquid limit, plastic limit, and plasticity index (ASTM D4318), however in all cases these tests resulted in a non-plastic designation. The minus #40 sieve fraction could not be rolled out into a string 3mm thick without crumbling, or the material was sliding rather than flowing in the liquid limit cup.

The test results are presented on the individual Grain Size Distribution Test reports contained in Appendix A of this report. The seven (7) Liquid Limit-Plastic Limit Test reports are included in Appendix B.

Should you have and questions, or in case we may be of further service, do not hesitate to contact the undersigned at 716-735-3400.

Respectfully submitted,

EMPIRE SOILS INVESTIGATIONS, INC.

 Jorgen F. Christiansen, PE
 Director, Geotechnical Testing

TYPE OF WELL (as per Well Permit Categories) MONITORING Date well completed 6/7/83
Regulatory Program Requiring Well None Case I.D. # None

CONSULTING FIRM/FIELD SUPERVISOR (if applicable) None Tele. # None

WELL CONSTRUCTION

Total depth drilled 13 ft.

Well finished to 11.5 ft.

Borehole diameter:

Top 11 in.

Bottom 11 in.

Well was finished: ☒ above grade
☐ flush mounted

If finished above grade, casing
height (stick up) above land
surface 2 ft.

Was steel protective casing installed?

☒ Yes ☐ No

Static water level after drilling None ft.

Water level was measured using M-Scope

Well was developed for 1 hours at None gpm

Method of development Pump + Surge

Was permanent pumping equipment installed? ☐ Yes ☒ No

Pump capacity N/A gpm

Pump type: N/A

Drilling Method HSA

Drilling Fluid None Type of Rig Drill 2.5Z

Name of Driller Wellington Beve

Health and Safety Plan submitted? ☒ Yes ☐ No

Level of Protection used on site (circle one) (None) D C B A

N.J. License No. 1455

Name of Drilling Company None

	Depth to Top (ft.) [From land surface]	Depth to Bottom (ft.)	Diameter (inches)	Type and Material

Karen Tranter

- 0930 Visitor onsite. Sunny 68°F
drillers are finishing concreting in MWs + plan
to develop MW16-001 and possibly MW20-001
- 1000 went to get someone to unlock the vehicle +
equipment storage area next to bldg 495.
- 1030 drillers are painting pickets + cementing in
MW24-001.
- 1130 drillers have completed several concrete blocks.
- 1145 onsite for lunch.
- 1245 onsite. call Sam.
- 1405 drillers have poured concrete forms ^{today} on the following:
- MW10-001
 - MW11-002
 - MW14-002
 - MW15-001
 - MW16-003
 - MW24-001
 - P15-001
- pickets have been mostly painted + are drying.
- 1445 begin developing MW16-001

pH 5.6
Cond 250
NTU off the scale

6-14-93 KS

1500

pH 5.9
cond 300
NTU off scale

will finish tomorrow (slow to recharge)

1530

off site KS

6-15-93
Kibbe/Torres
Party Study

- 0830 onsite. drillers are here + have completed painting the pickets and are loading up extra supplies.
- 0900 begin developing MW16-001 again.
- 0915 have taken several samples - all off the NTU scale though look relatively clear, w/ some suspended particles.
- 0930 Flatbed + loader arrive to stage drums. drillers are pouring forms on remaining wells/piezos.
- 0950 no change in H_2O - still clear/cloudy + off the NTU scale.
- 1015 same as above. continuous pumping since we began.
- 1030 pump motor cut itself off. went to get gates unlocked for drum removal etc, + label some unmarked drums.
- 1110 begin pumping MW16-001 again (pump needed gas). H_2O is siltier again (not as clear as when pump turned off).
- 1116 sample: NTU: off scale pH: 5.9 cond: 310

6-15-93 K5

1125 Sample: NTU: off scale
pH: 6.0
cond: 300

1150 took 3 other samples to check NTU - all off scale + somewhat cloudy. slow to recharge.

1217 Sample NTU: ~~off scale~~^{95.9}
pH: 6.0
cond: 280
H₂O is white cloudy

1220 will turn pump off + move to other well after lunch. removed 55 gal. off site.

1300 call Dan. drillers begin pumping MW20-001. recharges quickly but very cloudy white. (ie. white clay color)

1310 sample NTU: off scale
pH: 6.1
cond: 150

1320 sample NTU: off scale
pH: 6.1
cond: 150

1440 sample NTU: 133.7
pH: 6.0

removed 4 drums (55 gal) = 220 gal total today

1520 loader for staging drums got a flat - ^{someone} ~~the~~ went
to get an inner tube. Wells is setting pickets in
place - to be cemented in tomorrow. Jon + Bill
are pouring the final concrete block for MW16-01.
looks like there are a total of 84 drums (?)
[recount later] + approx 54 are in staging area
- the remaining to be picked up tomorrow.

1100D offside 

6-4-93 KG

1045 Dan is on-site. He says to make sure our final clay layer is thick enough to be a confining unit. Drillers will drill further for a sample @ 34' deep.

15 surveyor on-site.

15 Verbar offsite for lunch.

30 Verbar onsite — plan to develop all 3 piezometers.

GPR DOCUMENTATION

GPR SURVEY RESULTS PEDRICKTOWN SUPPORT FACILITY

1.0 INTRODUCTION

A GPR survey was conducted at the Pedricktown Army Support Facility in Salem County, NJ. The purpose of the investigation was to confirm suspected underground storage tank (UST) locations. A total of eleven separate areas, defined by personnel from Versar, were investigated on July 20-21, 1993.

2.0 INSTRUMENTATION AND PROCEDURE

A GSSI SIR-3 GPR unit equipped with a 500 mhz antenna was used for the survey. Lines were completed in two directions at 90° orientations in each area. Lines were typically separated by 10 feet, although smaller line spacings were used in areas exhibiting anomalous traces. The instrument was initially calibrated for depth using a pipe at a known depth (3 feet) located adjacent to Area 2. All depths listed in the report are based on the initial calibration.

The areas covered by the survey were staked by Versar personnel prior to arrival of INTEX personnel at the site.

3.0 RESULTS

The results of the investigation are shown on the attached sketches. Figure 1 is a site plan showing all of the survey areas, and Figures 2 through 11 are the individual areas showing the GPR lines and anomalous targets. The types of anomalies observed included objects which definitely appeared to be tanks or similarly shaped objects. Other smaller point targets, which may be features such as underground lines or discrete objects are also shown. In addition to individual targets, there were two other types of anomalies identified in the GPR traces: 1) disturbed strata, and 2) layers or surfaces which acted as reflecting strata. These two latter types of anomalies did not exhibit features strongly indicative of UST's, although the client is encouraged to further investigate these areas. The presence of disturbed strata, for example, may represent a former UST area which has been filled with potentially contaminated soil. A strongly reflecting layer can be a clay layer or concrete pad installed over a UST, or an excavation which has been filled in with a highly reflecting fill material.

Smaller point targets are often associated with utility or tank feed lines. In areas where the point targets were found to have a very similar appearance and located at similar depths across successive lines, they were presumed to represent a continuous utility line, and were marked as such on the sketches. However, this was done to facilitate future investigation of the targets, and should not be used as a utility location map.

The specific areas are discussed separately below.

3.1 Area 1 (Figure 2)

Several small target anomalies were observed through the center of Area 1. In addition, one GPR line appeared to travel directly over a utility line which appeared as a strong reflector at a depth of approximately one foot. No anomalies indicative of UST's were observed in this area.

3.2 Area 2 (Figure 3)

Area 2 was an irregularly shaped area north of West Rd. Much of area 2 appeared to be covered with a concrete pad. A possible UST was located immediately south of the pad, in the location shown in Figure 3. The top of the tank appears to be at a shallow depth, within one to two feet of the ground surface.

3.3 Area 3 (Figure 4)

This area was divided into two sub-areas, shown as 3-1 and 3-2. Area 3-1 had numerous small targets and areas exhibiting disturbed subsurface strata. On the west side of this area, the targets and disturbed strata appeared to be located around two manholes, and it is therefore likely that the anomalies are due to subsurface utilities. On the east side of area 3-1, there was another section of disturbed strata and several additional targets. These were not associated with any surface features.

Area 3-2 did not exhibit any anomalies indicative of UST's.

3.4 Area 4 (Figure 5)

The presence of two apparently active pumps in Area 5 indicated that at least two UST's were probably also present. Two large objects which are probably tanks were located in the north and south corners of area 4. A third probable tank, smaller in size, was also found along the northwest side of the area. The approximate sizes are shown in Figure 5. The tank in the southwest corner appears to be close to the ground surface (1-2 feet). The tank in the north corner is approximately 2-3 feet below the surface, and the small tank is approximately 1-2 feet below the ground.

3.5 Areas 5 and 8 (Figure 6)

Area 5 contained numerous small targets, and a probably utility line associated with a manhole on the south side of the area. However, there were no anomalies indicative of UST's.

Area 8 also contained a manhole and several small targets which are likely associated with utility lines. The area also contained a small object at a depth of approximately 3 feet which may be a tank or similarly shaped object.

3.6 Area 6 (Figure 7)

Area 6 was divided into two sub-areas, 6-1 and 6-2. Both areas contain anomalies which resemble disturbed strata and possibly also contain discrete objects at depths of 2-3 feet. Area 6-1 also contains an anomaly on the southwest side which consistent with a tank. It is located at a depth of 3-4 feet.

3.7 Area 7 (Figure 8)

Area 7 contained numerous small targets, and several apparent utility lines. One of the GPR lines traversed directly over one of these lines. There were no anomalies consistent with a tank in this area.

3.8 Area 9 (Figure 9)

There is an object near the center of area 9 which may be a small tank or similarly shaped object. It is located at a depth of approximately 1-2 feet.

3.9 Area 10 (Figure 10)

Area 10 was divided into two sub-areas. Area 10-1 exhibited a large section of disturbed strata, and an object which might be a small tank located at a depth of approximately 2-3 feet. Area 10-2 contained two apparent utility lines, but in addition, also contained two anomalies on the southeast side of this area. A strongly reflecting layer at a depth of approximately 5-6 feet was noted. Immediately east of this anomaly was an object at a shallower depth (approximately 2 feet) which could be an underground tank. It is speculated that the object is resting on a concrete or similar base material.

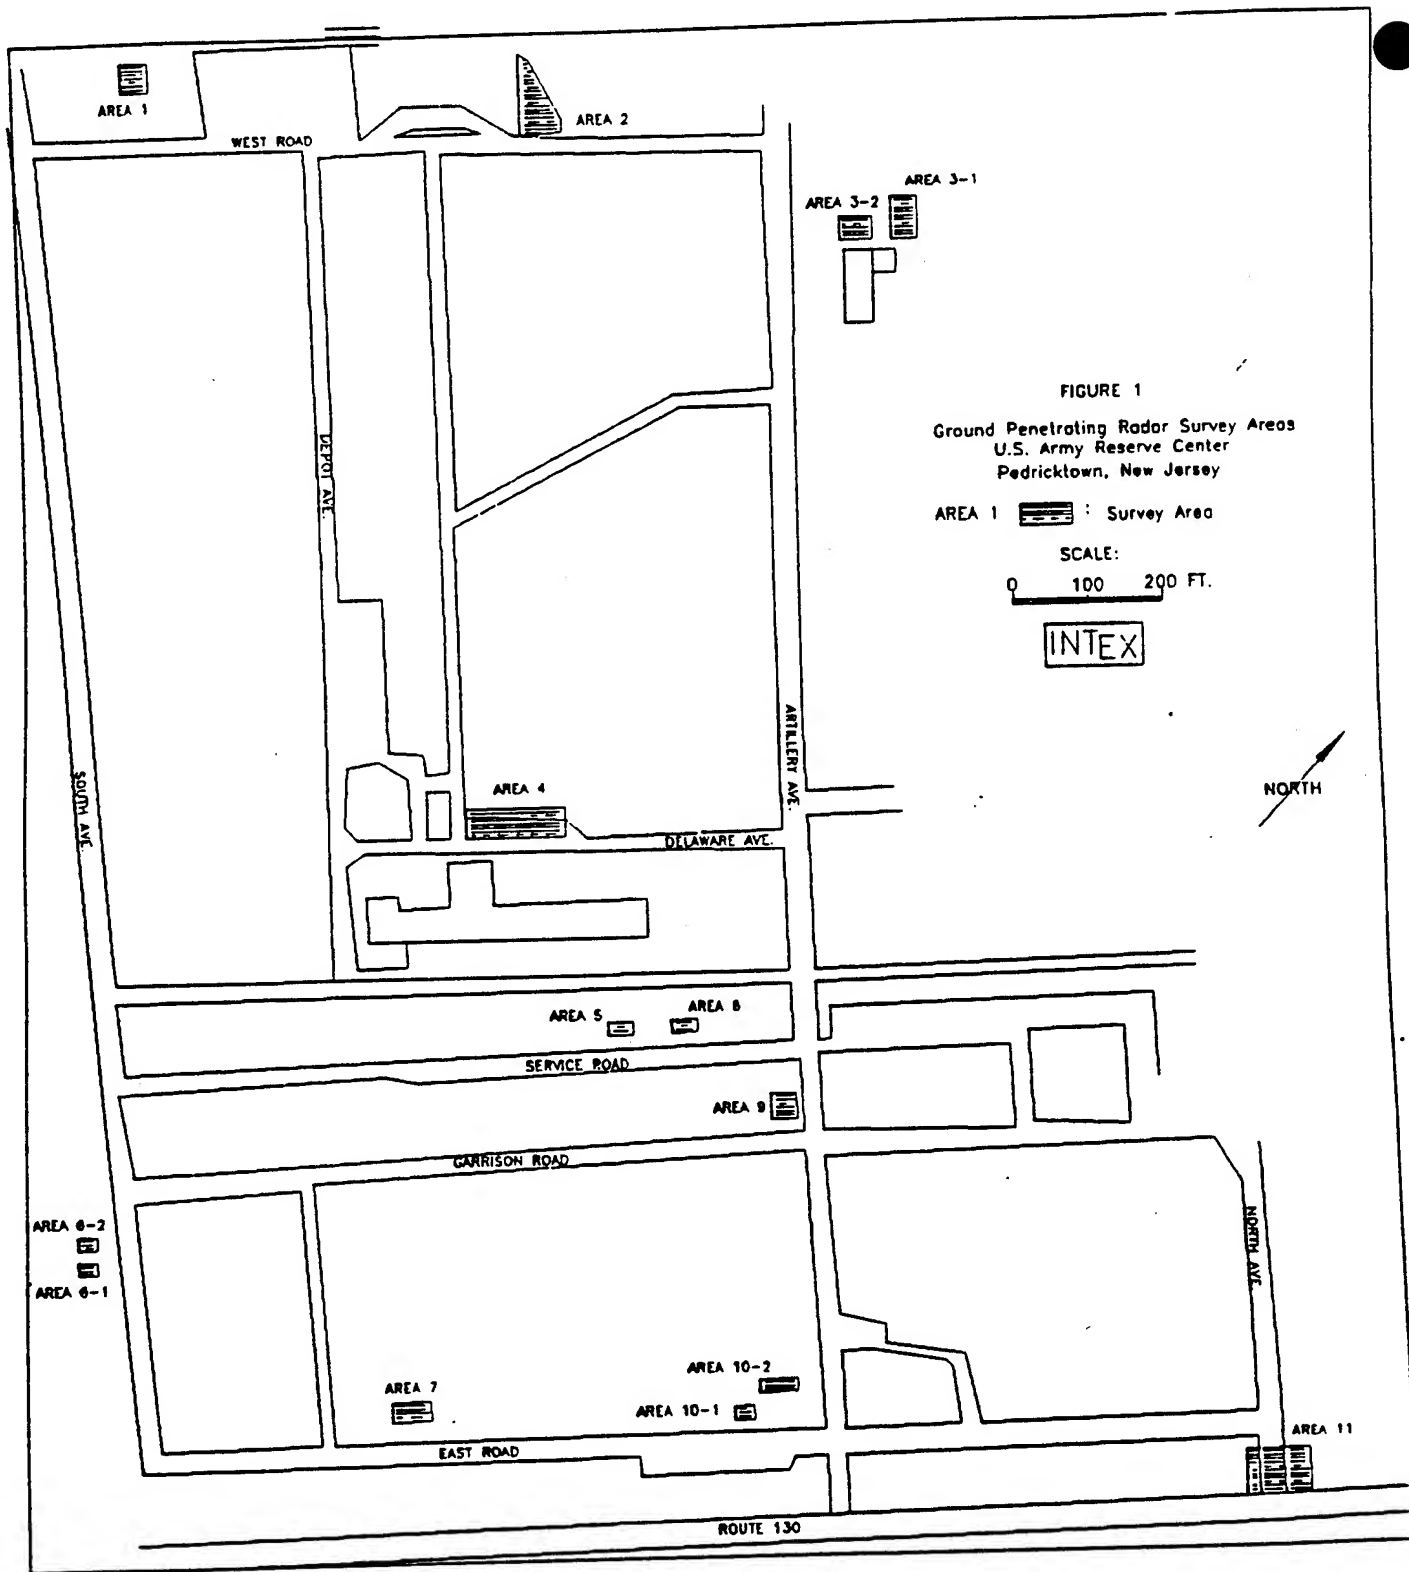

3.10 Area 11 (Figure 11)

Three small targets were observed in this area. None of the targets were indicative of an underground tank.

4.0 CONCLUSIONS/RECOMMENDATIONS

Areas exhibiting anomalies which may be attributable to underground storage tanks or objects large enough to be UST's include areas 2, 4, 6, 8, 9, and 10-2. Additionally, the survey revealed locations containing disturbed strata not associated with known features such as manholes. These locations, which should be further investigated, include areas 3-1 (southeast corner), area 6-1 (center) and 6-2 (southeast corner). Other anomalies and targets were observed, but were considered to be too small to be a tank. Most of these anomalies are presumed to correspond to underground utilities.

Because of the potential presence of numerous underground utility lines, it is recommended that a site map showing utility lines be obtained prior to additional investigation.

NOTE

EPA uses the terms "facility," "site," and "release" interchangeably. The term "facility" is broadly defined in CERCLA to include any area where hazardous substances have "come to be located" (CERCLA Section 109(9)), and the listing process is not intended to define or reflect boundaries of such facilities or releases. Site names, and references to specific parcels or properties, are provided for general identification purposes only. Knowledge regarding the extent of sites will be refined as more information is developed during the RI/FS and even during implementation of the remedy.

Documentation for Source Type:

The source is an area of observed surface soil contamination at the northwest corner of the PSF facility. Review of aerial photographs and historic information suggests that scrap metal and other miscellaneous junk was at one time deposited/stored in the area. No waste pile remains. Surface soil samples obtained during the expanded site inspection delineated an area of approximately 3.7 acres exhibiting metals concentrations in excess of three times background for the facility. There are no containment structures associated with this source.

Reference: 21

Documentation for Source Hazardous Substances:

Soil samples were collected during the expanded site inspection. The data from analyses of these samples are presented in Tables 4.5 and 4.6 of the ESI report. These tables include the background concentrations and detection limits for the analytes. Contaminants associated with the area of observed soil contamination are listed above. Available information indicates that scrap metal and other junk was stored in the area of observed contamination. This supports attribution of the contamination to site activities.

Reference: 21

Documentation for Source Area:

The source area was estimated by delineating the area between surface soil sampling locations that exhibited elevated metals concentrations. The perimeter locations were MW13-001, SB11-003, SB11-002, MW11-001, and MW12-001. Buildings and paved areas were included in this calculation.

Source Hazardous Substances	Depth (feet)	Liquid	Concent.	Units
Tetrachloroethene	> 2	YES	2.6E+01	ppm

Documentation for Source Type:

The source is a 1,000 gallon underground storage tank used to store waste oil. Storage of waste solvents is suspected, as evidenced by the detection of tetrachloroethene, a degreasing solvent reportedly used onsite, in a downgradient groundwater monitoring well. No other hazardous substances have been associated with this source. The tank has no secondary containment features and was installed prior to 1965. At the time of the expanded site inspection, the tank was reportedly still utilized for waste oil storage.

Reference: 14,21

WASTE QUANTITY
Pedricktown - 10/06/93

Documentation for Source Hazardous Substances:

Tetrachloroethene (PCE) is the only hazardous substance attributable to this source. This compound was detected in a downgradient monitoring well (MW-16-001) sampled during the expanded site inspection. PCE was detected at 26 ppb in the monitoring well. No PCE was detected in background wells. The detection limit for PCE was 2 ppb.

Reference: 21

Documentation for Source Volume:

The waste oil underground storage tank has a volume of 1,000 gallons. Using the conversion factor of 2.5 gallons/cubic yard, the source was assigned a volume of 400 cubic yards.

Aquifer: Cape May

Type of Aquifer: Non Karst

Overlying Aquifer: 0

Interconnected with: 0

Documentation for Cape May Aquifer:

The Cape May Formation is the surficial aquifer at the site. It is unconfined and approximately 27 to 30 feet thick. The primary aquifer soils are classified as poorly graded sands or gravelly sands with little to no fines, to sand-silt mixtures. The Cape May is planar in geometry and decreases in thickness near the Delaware River. Groundwater flow is to the west with discharge to the Delaware River. Unconformably situated under the Cape May is the Potomac-Raritan-Magothy aquifer system. This system is confined, dips to the southeast, and is greater than 100 feet thick. No hydraulic interconnections between the Cape May and the Potomac-Raritan-Magothy have been identified within 2 miles of the PSF site.

> 2 to 3	6692.0	6.78E+01
> 3 to 4	3585.0	4.17E+01

Potential Contamination Factor: 112.000

Documentation for Target Population > 0 to 1/4 mile Distance Category:

The population served by drinking water wells was estimated by consulting information provided by the Pennsville Water Department, which services the area of the site. Pennsville uses an equal number of wells tapping the Cape May and the underlying Raritan-Potomac-Magothy aquifer. However, the exact percentage of raw water provided by each aquifer could not be determined. Therefore, population served by Pennsville was divided equally between the two aquifer systems. Due to an observed release to the Cape May, the Raritan-Potomac-Magothy was not evaluated.

Areas not covered by Pennsville were assumed to rely on private wells tapping the Cape May Aquifer. The county average of 3.28 persons per household was used to calculate the number of people served by private wells.

Reference: 2,10,13,20,21

Nearest Well

Level of Contamination: Potential
Distance in miles: 0.40

Nearest Well Factor: 1.80E+01

Documentation for Nearest Well:

Two wells are located at the Deitrich residence approximately 0.4 miles southeast of the PSF site, one draws from the Cape May aquifer and one draws from the Potomac-Raritan-Magothy formation.

APPENDIX J-4
SURFACE WATER PATHWAY DOCUMENTATION

No. Segment ID	Segment Type	Water Type	Start Point (mi)	End Point (mi)	Average Flow (cfs)
1 Drainage Swale	River	Brack	0.00	1.15	5
2 Delaware River	River	Brack	1.15	15.00	13463

Documentation for segment: Drainage Swale:

The PPE for contamination emanating from the contaminated soils is near the northwest corner of the PSF property. The overland migration path to the PPE consists of approximately 25 feet of open grass and brush covered land.

The drainage swale is located approximately 25 feet north of the area of observed surface soil contamination. The swale is perennial and brackish. The swale flows from the probable point of entry for a distance of approximately 1.15 miles, where it converges with the Delaware River. A flow rate of 5 cubic feet per second was measured in the swale during the ESI.

Reference: 20,21

Documentation for segment: Delaware River:

The Delaware River represents the second segment along the surface water migration pathway. Tidal influence near the point of convergence with the drainage swale is equivalent to approximately 2 miles. Thus, the TDL extends approximately 2 miles upstream of the convergence of the swale and the Delaware, and 13.75 miles downstream of the convergence. The Delaware is brackish and has a flow of approximately 13,463 cubic feet per second.

Sum of (Pi*Di): 3.10E-03

Potential Human Food Chain Contamination Factor: 3.10E-04

Documentation for Drainage Swale Fishery:

There is no known production of human food chain organisms
 in the drainage swale.

Reference: 6,21

Documentation for Delaware River Fishery:

Actual production data for the Delaware River segment of the surface
 water migration pathway is not available. A production value of 1
 billion pounds per year would be required in order to realize a
 significant change in the pathway score. The section of the
 Delaware covered by the TDL supports only subsistence and
 recreational fishing. This level of fishing would not approach the
 1 billion pound total. For estimating purposes, a value of 10,000
 pounds was assigned for production.

Reference: 5,7,21

Food Chain Individual

Location of Nearest Fishery: Delaware River
Distance from the Probable Point of Entry: 1.15 miles
Type of Surface Water Body: River
Dilution Weight: 0.0001000

Documentation for Sensitive Environment Swale Wetlands:

The drainage swale flows approximately 1.15 miles to the Delaware River. Hydrophytic vegetation was observed on both banks of the swale during the ESI. Therefore, a frontage of 2.3 miles was assigned for swale wetlands.

Reference: 21

Documentation for Sensitive Environment Wetlands:

Wetlands frontage measured along the Delaware River from 12 to 14 miles downstream of the confluence of the drainage swale and the Delaware River. Wetlands include sections of Pea Patch Island, as well as areas in Delaware and New Jersey. Tidal flats were not considered because these areas were observed during the ESI to not support hydrophytic vegetation.

Reference: 20,21

Documentation for Sensitive Environment Pea Patch Island:

Pea Patch Island Nature Preserve is located within the Delaware River approximately 12 miles down river of the confluence of the drainage swale and the Delaware River.

Reference: 1,20

Documentation for Sensitive Environment Kilcohook Wild Ref.:

The Kilcohook National Wildlife Refuge fronts the Delaware River from approximately 10 to 12 miles down river of the convergence of the drainage swale and the Delaware River.

Reference: 4,12,20

Documentation for Sensitive Environment Wetlands:

Wetlands along the Delaware in New Jersey and Delaware from 9.5 to 11 miles downstream of the confluence of the drainage swale and the Delaware River.

Reference: 20

Documentation for Sensitive Environment Wetlands:

Wetlands identified in Delaware along the Delaware River
approximately 6 miles down river of the confluence of the Delaware
and the drainage swale.

Aquifer: Cape May

Type of Aquifer: Non Karst

Overlaying Aquifer: 0

Interconnected with: 0

Documentation for Cape May Aquifer:

The Cape May Formation is the surficial aquifer at the site. It is unconfined and approximately 27 to 30 feet thick. The primary aquifer soils are classified as poorly graded sands or gravelly sands with little to no fines, to sand-silt mixtures. The Cape May is planar in geometry and decreases in thickness near the Delaware River. Groundwater flow is to the west with discharge to the Delaware River. Unconformably situated under the Cape May is the Potomac-Raritan-Magothy aquifer system. This system is confined, dips to the southeast, and is greater than 100 feet thick. No hydraulic interconnections between the Cape May and the Potomac-Raritan-Magothy have been identified within 2 miles of the PSF site.

Sum of (Pi*Di): 1.24E-03

Potential Human Food Chain Contamination Factor: 1.24E-04

Documentation for Drainage Swale Fishery:

There is no known production of human food chain organisms in the drainage swale.

Reference: 6,21

Documentation for Delaware River Fishery:

Actual production data for the Delaware River segment of the surface water migration pathway is not available. A production value of 1 billion pounds per year would be required in order to realize a significant change in the pathway score. The section of the Delaware covered by the TDL supports only subsistence and recreational fishing. This level of fishing would not approach the 1 billion pound total. For estimating purposes, a value of 10,000 pounds was assigned for production.

Distance from the Probable Point of Entry: 1.15 miles
Type of Surface Water Body: River
Dilution Weight: 0.0000400
Level of Contamination: Potential

Food Chain Individual Factor: 0.00

Documentation for Delaware River:

The Delaware River represents the second segment along the surface water migration pathway. Tidal influence near the point of convergence with the drainage swale is equivalent to approximately 2 miles. Thus, the TDL extends approximately 2 miles upstream of the convergence of the swale and the Delaware, and 13.75 miles downstream of the convergence. The Delaware is brackish and has a flow of approximately 13,463 cubic feet per second.

SOIL EXPOSURE PATHWAY DOCUMENTATION

Likelihood of Exposure

No. Source ID Level of Contamination

1 Contaminated Soil Level I

Likelihood of Exposure Factor: 550

Documentation for Area of Contamination, Source Contaminated Soil:

Area of observed contamination was delineated using sample data obtained during the expanded site investigation. The area encompassed by sample locations MW13-001, MW12-001, MW11-001, SB11-002, and SB11-003 (see ESI Figure 4.1) exhibited contaminant concentrations attributable to the site in excess of three times background concentrations.

Reference: 21

Documentation for Area of Contamination, Source Waste Oil Tank:

No areas of observed contamination are associated with the waste oil tank. Contamination was limited to groundwater in the area of this source.

Reference: 21

1	Vanadium	< 2	5.2E+01	0.0E+00	4.1E+03	ppm
1	Zinc	< 2	7.2E+02	0.0E+00	1.7E+05	ppm

Documentation for Source Contaminated Soil, Contaminants:

Soil samples were collected during the expanded site inspection. The data from analyses of these samples are presented in Tables 4.5 and 4.6 of the ESI report. These tables include the background concentrations and detection limits for the analytes. Contaminants associated with the area of observed soil contamination are listed above. Available information indicates that scrap metal and other junk was stored in the area of observed contamination. This supports attribution of the contamination to site activities.

Reference: 21

Documentation for Source Waste Oil Tank, Contaminants:

Tetrachloroethene (PCE) is the only hazardous substance attributable to this source. This compound was detected in a downgradient monitoring well (MW-16-001) sampled during the expanded site inspection. PCE was detected at 26 ppb in the monitoring well. No PCE was detected in background wells. The detection limit for PCE was 2 ppb.

Targets

Level I Population: 0.0 Value: 0.00

Documentation for Level I Population:

There are no residents located within 200 feet of the area of observed contamination. The nearest occupied residence is located onsite, approximately 1400 feet from the area of contamination.

Reference: 6,21

Level II Population: 0.0 Value: 0.00

Documentation for Level II Population:

There are no residents located within 200 feet of the area of observed contamination.

Reference: 6,21

Workers: 15.0 Value: 5.00

Documentation for Workers:

Approximately 15 people employed by the facility have a workplace within 200 feet of the area of observed contamination. The workplaces consist of buildings 530 (wastewater treatment plant) and 506, which houses facility engineering, workshops, and storage space.

Gas Migration Potential

GAS POTENTIAL TO RELEASE

Source ID	Source Type	Gas Contain. Value (A)	Gas Source Type Value (B)	Gas Migrtn. Potent. Value (C)	Sum (B+C)	Gas Potential to Rel. Value A(B+C)
Contaminated Soil	Contaminated Soil	10	19	11	30	300
Waste Oil Tank	Non-Drum Container	10	11	17	28	280

Gas Potential to Release Factor: 300

Documentation for Gas Containment, Source Contaminated Soil:

Contaminated surficial soils at the PSF site are covered by less than 1 foot of uncontaminated soil and are not heavily vegetated. Using HRS Table 6-3, a value of 10 was assigned.

Reference: 16,21

Documentation for Source Type, Source Contaminated Soil:

The source is an area of observed surface soil contamination at the northwest corner of the PSF facility. Review of aerial photographs and historic information suggests that scrap metal and other miscellaneous junk was at one time deposited/stored in the area. No waste pile remains. Surface soil samples obtained during the expanded site inspection delineated an area of approximately 3.7 acres exhibiting metals concentrations in excess of three times background for the facility. There are no containment structures associated with this source.

Reference: 21

Documentation for Gas Containment, Source Waste Oil Tank:

The waste oil UST is estimated to be covered by between 1 and 3 feet of uncontaminated, substantially vegetated soil. However, the vent pipe for the tank allows gases to escape directly to the atmosphere. Thus a value of 10 was assigned using HRS Table 6-3.

Reference: 21

Documentation for Source Type, Source Waste Oil Tank:

The source is a 1,000 gallon underground storage tank used to store waste oil. Storage of waste solvents is suspected, as evidenced by the detection of tetrachloroethene, a degreasing solvent reportedly used onsite, in a downgradient groundwater monitoring well. No other hazardous substances have been associated with this source. The tank has no secondary containment features and was installed prior to 1965. At the time of the expanded site inspection, the tank was reportedly still utilized for waste oil storage.

Documentation for Population Onsite Distance Category:

Population breakdown was accomplished by consulting published population data for New Castle County Delaware and the Pennsville Water Company and performing house counts in areas not covered by area specific information. The county average of 3.28 persons per household was multiplied by the number of houses to arrive at population numbers, which were added to the published information. Where radius boundaries intercepted areas covered by published data, percent coverage was estimated to determine the number of residents within the subject radius. Onsite population information is based on the number of workers employed by the facility, students using community college facility, and the number of residents occupying facility housing.
